Direction: (For Q11-12) Read the given passage carefully and select the appropriate answer:

In Bengal, many poor farmers had been forced and compelled to take up indigo cultivation when the British settlers were given the right to purchase and cultivate land in India.

Many whites, therefore, either acquired land or advanced loans to poor farmers and pressured them to forsake the farming of food grains and other cash crops for indigo cultivation. Within a few years, most of the fertile lands had undergone forcible indigo cultivation, resulting in a famine situation in Bengal. When the farmers declined to cultivate indigo, they were tortured, jailed and even killed.

11. The poor farmers in Bengal took up indigo cultivation because:

This was the only crop that would grow in Bengal.

It was a lucrative earning opportunity for the farmers.

Farmers were forced to do so.

The British government gave the farmers huge money for indigo cultivation.

12. Why did indigo cultivation result in famine in Bengal?

Farmers were not interested in the cultivation of food grains.

Most of the fertile lands had undergone forcible indigo cultivation.

British settlers forcibly took away all the food grains out of Bengal.

SECTION-V PSYCHOMETRIC TEST

This test is designed to measure your ability to interpret verbal information and reach correct conclusions.

The brain has around one hundred billion cells (neurons). Brain cells make links that form neural pathways and it is these links that help us to learn. It is estimated that there might be as many as one hundred trillion such neural links, although others have put the figure much higher – 1 with millions of zeros after it. The number of neural links has been likened to trying to imagine all the trees in the Amazon rainforest as the number of neurons, and the number of leaves on every tree in the rainforest as the number of neural connections. Much of the new research into how the brain works has been boosted by the development of magnetic resonance imaging (MRI) technology. This technology allows us to be able to gain a greater understanding of the complex processes that are involved in normal human activity. Different parts of the brain can be shown to be more active in certain types of human physical and mental activity than others, and whilst we still have much to learn about the brain, the leap in our understanding has not only helped the medical profession but also business and economics.

Question 1. There are one hundred trillion neural links in the human brain.

- A. True
- B. False
- C. Cannot say
- D. None of the above

Question 2. MRI technology is useful to conduct research on the brain.

- A. True - The second paragraph details how MRI technology helps us better understand the complex processes involved in normal human activity.
- B. False
- C. Cannot say
- D. None of the above

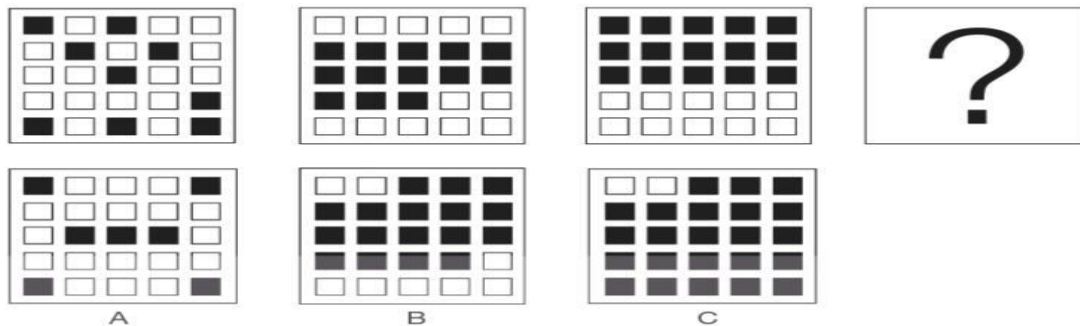

Question 3. Improving our understanding of the brain is useful for sports.
